Level of protection against Delta variant

According to the latest PHW data, the 1st dose of Covid vaccine provides an estimated 25-36% protection against the Delta variant, protecting against symptomatic disease. The 2nd dose raises the level of protection up to 77-82%. Therefore it is important that you receive both doses of the Covid vaccination for maximum protection.

We are currently vaccinating those aged 40-49 years with their 2nd dose and those aged 30-39 years will start to receive their 2nd dose invite over the next few weeks.

If you received your 1st dose of Pfizer between 7th December 2020 – 30th April 2021 and not yet received your invite for your second vaccine, please complete the following form on our website:

<https://abuhb.nhs.wales/coronavirus/covid-19-vaccine/overdue-pfizer-second-dose/>

If you received your 1st dose of AstraZeneca at a Mass Vaccination Centre between the dates of 4th January 2021 – 30th April 2021 and not yet received an invite for your 2nd dose, please complete the following form on our website: <https://abuhb.nhs.wales/coronavirus/covid-19-vaccine/overdue-astrazeneca-second-dose/>

If you received your first dose of AstraZeneca vaccine at your GP practice, they will be in contact directly to arrange your second dose.
